

PERSONAL STATEMENT

Strategic cybersecurity executive with a proven track record of transforming security organisations and embedding security at scale. At Electronic Arts, I lead enterprise-wide security programmes that enable thousands of developers to ship secure games and software to 700 million players without friction. I specialise in building high-impact security teams, creating scalable security platforms, and driving executive-level security strategy in global technology firms. More recently, my focus has expanded into applying agentic AI and adversarial multi-agent approaches to security, embedding security directly into developer workflows and evolving vulnerability discovery beyond traditional techniques. My leadership philosophy centres on aligning security with business objectives, leveraging automation and emerging technologies to drive efficiency, and fostering a culture where security is an enabler, not an obstacle.

EMPLOYMENT

Electronic Arts Inc. (EA),

Jan 2022 – Present: Director, Security Software Engineering (*Global*)

- Architected and executed EA's developer-first security strategy, embedding security seamlessly into the development lifecycle for thousands of engineers. Advocated for security-by-design principles while ensuring that security tools were frictionless, fast, and aligned with developer needs.
- Conceptualised, developed, and launched Talos, EA's enterprise-wide security scanning platform, providing comprehensive security automation across secrets, IaC, SAST, SBOM, licence compliance, and related domains. Fully integrated into CI/CD pipelines, Talos delivers real-time visibility into security posture and has significantly accelerated remediation while reducing engineering friction.
- Built Dashy, EA's gameplay integrity analysis platform, working in close partnership with EA Javelin Anticheat. Dashy aggregates telemetry, gameplay statistics, and machine learning models to enable analysts to identify and act on disruptive player behaviour at scale, directly improving gameplay integrity and player experience across EA titles.
- Led the development of Pallas, an agentic AI security platform providing signed and verifiable security guidance to developers using tools such as Claude Code, GitHub Copilot, and Windsurf. Pallas delivers context-aware, always-on guidance via lightweight integration points (e.g. CLAUDE.md), alongside on-demand capabilities such as pre-flight checks and automated validation, introducing a new model for embedding security into AI-assisted development workflows.
- Designed and built Zipline, an adversarial security scanning harness leveraging teams of AI agents to analyse, build, and exploit applications. Implements a multi-stage FIND → VERIFY → CRITIQUE → JUDGE loop to simulate real-world attacker behaviour and uncover high-impact vulnerabilities beyond traditional scanning approaches.
- Built EA Guardians, a gamified security awareness and training platform used by every full-time employee. Designed to make security education engaging and effective through interactive learning and real-world scenarios.
- Developed EA Security's Docs Portal, a centralised repository for partner-facing security documentation, improving accessibility and reducing friction in compliance and security engagement processes.
- Launched the EA Security Portal, a single pane of glass for security tooling, governance, and engagement. Serves as the primary interface for teams across EA to engage with Security, hosting engagement workflows, artefact collection, cheat reporting, and self-service security capabilities.
- Drove executive-level security strategy, working closely with C-suite leadership, game studio executives, and engineering VPs to align security initiatives with business goals. Provided regular security briefings, risk assessments, and investment recommendations.
- Scaled EA's security software engineering function, recruiting and mentoring high-performing engineers while fostering a culture of innovation and technical excellence.

Amazon Web Services (AWS) UK Ltd,

Oct 2020 – Jan 2022: Senior Security Consultant – AWS ProServe, Global Strategic Accounts (*Global*)

- Worked within AWS's elite Global Strategic Accounts practice, delivering high-impact security transformations for Amazon's top 20 global customers, including Fortune 50 companies across healthcare, semiconductor, automotive, and financial services.
- Led a security risk assessment for AstraZeneca in the context of developing COVID-19 vaccines. Assessed their threat landscape against nation-state attackers, providing bespoke security recommendations to protect high-value research and vaccine production infrastructure from cyber espionage and intellectual property theft.
- Served as the security 'Bar Raiser' for a hyperscale cloud migration on behalf of Arm, securing high-performance compute environments used for system-on-chip (SoC) design. Designed governance frameworks, threat models, and cloud-native security controls, while embedding security automation into their CI/CD pipelines.
- Led security strategy for Mercedes-Benz's global AWS platform, ensuring that mission-critical vehicle sales and backend systems met AWS security best practices. Defined and implemented governance, logging and alerting, incident response, data protection, and network security to secure the platform at scale.
- Partnered directly with CISO-level executives and security leadership teams to define long-term cloud security roadmaps, ensuring alignment with regulatory requirements, risk management strategies, and business growth objectives.
- Acted as a mentor and leader within AWS's Security Area of Depth Programme, training AWS consultants in cloud security best practices and real-world threat modelling.

DAVE PROWSE

+44 (0)7595048748 | dave@prow.se

Dyson Technology Ltd,

Apr 2019 – Oct 2020: Global Director - Product, Automotive and Manufacturing Cybersecurity (Product CISO & Deputy CISO) (*Global*)

- Appointed Interim CISO, leading enterprise-wide security strategy, board-level reporting, and security governance across Dyson's global operations. Transitioned into Deputy CISO and Product CISO, continuing to drive long-term security initiatives and risk management frameworks with a specific focus on product and manufacturing security.
- Defined and executed Dyson's security roadmap, ensuring alignment with business objectives and resilience against emerging cyber threats.
- Oversaw security governance and maturity development using NIST CSF and BSIMM, aligning Dyson's security posture with recognised international standards.
- Implemented NIST SP 800-82 (Rev. 3) for operational technology environments and embedded NIST 800-53 controls into enterprise and product security practices.
- Provided executive leadership on cybersecurity risk management and regulatory compliance, overseeing security for corporate IT, manufacturing, Connected Car, and Connected Home teams.
- Established a global centre of excellence for product and manufacturing cybersecurity, overseeing security for embedded software, cloud infrastructure, and operational technology (OT) across Dyson's own facilities and contract manufacturers.
- Built and led a globally distributed cybersecurity team, scaling Dyson's security capabilities across Internet-of-Things (IoT), cloud security, penetration testing, and vulnerability management.

Feb 2016 – Apr 2019: Head of Security Architecture (*Global*)

- Built Dyson's Security Architecture function from the ground up, scaling from a single security architect to a multi-team department covering security engineering, product security, and offensive security.
- Led security transformation initiatives, including a cloud security transformation and initiatives that enabled future-of-work and remote working capabilities. This work proved critical in ensuring business continuity and security resilience during the COVID-19 pandemic.
- Designed security controls for Dyson's IoT and Connected Home products, navigating complex regulatory requirements and security challenges.
- Launched Dyson's Bug Bounty Programme, improving product security and vulnerability management across consumer devices.

Atos IT Services UK Ltd,

Aug 2014 – Feb 2016: Network Technical Architect (*UK*)

- Led security architecture for UK government and critical national infrastructure clients, ensuring compliance with stringent security regulations.
- Successfully delivered large-scale data centre security transformations and complex network security upgrades.

Attenda Ltd (now Ensono),

Jun 2013 – Aug 2014: Senior Network and Security Engineer (*Global*)

- Provided technical leadership in network security, resolving critical incidents and implementing best-practice security configurations.
- Led continuous service improvement initiatives, enhancing security posture and operational resilience.

Symantec.cloud (FKA MessageLabs), part of Symantec Corporation (now Broadcom),

May 2011 – Jun 2013: Principal Network Engineer (*Global*)

- Designed and maintained Symantec.cloud's global security scanning infrastructure, ensuring high availability and resilience against emerging threats.
- Led network security strategy and risk management, providing executive-level security guidance and incident response leadership.

Star Technology Services Ltd (now Claranet),

Nov 2006 – Apr 2011: Core Services Engineer (*UK*)

- Advanced troubleshooting and comprehensive 3rd-line support for network and security solutions at a UK-based ISP.

INTERESTS

I'm passionate about technology, building software, and solving technical challenges, whether through automation and AI, scripting, or just tinkering with new frameworks and tools. I enjoy coding for fun, exploring new programming languages, and experimenting with ways to make security frictionless for developers. Outside of tech, I love board games, video games, craft beer and bad sci-fi, though not necessarily in that order. I enjoy both watching and performing live music and regularly play saxophone in big bands across the South West of the UK. I'm an armchair connoisseur of NFL, Rugby Union and F1. I also love cooking and make a mean Gong Bao chicken. I live in the UK with my wife and two children.
